About Me

Back-End Developer and Computer Science student at FIAP, focused on delivering technology solutions that drive real business impact. I have strong experience with TypeScript, Node.js, and Python, combining product vision with software engineering best practices such as software architecture and unit testing.

Experience

Community Manager, FIAP – Remote

Jun 2025 – present

- **Automation Development (TypeScript + JavaScript):** Identified a high volume of manual work in event management for the team. Developed an end-to-end integration using TypeScript and Node.js, enabling automated event creation and management with a single click. The solution eliminated manual data entry and saved 57 hours of monthly operational work.
- **Management Platform Development (React + AWS Serverless + TypeScript):** Built an end-to-end web application focused on automating professor hour registration. Designed the registration interface and created the backend for automated payroll report generation, eliminating manual calculation errors and reducing registration and payroll processing time for the responsible team.
- **Bot Development (TypeScript + Prisma + Bun):** Developed a corporate bot to automate operational workflows for the Pós Tech Community Management team. Implemented the project in TypeScript within the Bun ecosystem using Prisma ORM, migration control, and layered architecture. The solution eliminated multiple recurring manual processes and ensured high code maintainability for future features.

Education

FIAP, Bachelor's in Computer Science – Hybrid, Paulista

Feb 2025 – present

Skills

Programming Languages: TypeScript, NodeJS, Python

Runtimes & Frameworks: Node.js, Bun, Express, Discord.js, React

Software Engineering: Layered Architecture, Unit Testing, REST API

Infrastructure & DevOps: Docker, Docker Compose, CI/CD, AWS Serverless

IoT & Electronics: ESP32, Microcontrollers, Sensor Integration

Databases & ORMs: MySQL, Postgres, Prisma

Languages: English (B2), Mandarin (A1)

Volunteering

Rotary International Volunteer (Exchange Program)

Aug 2023 – Oct 2024

During my exchange program in Mexico and Taiwan, I studied Spanish and Mandarin while engaging in volunteer work for social causes and connecting with diverse cultures and people.

Rotex São Paulo Trainee

Feb 2026 – present

Rotex is an international organization of young individuals who have participated in the Rotary Youth Exchange Program (rebounds). Members volunteer to assist exchange operations, focusing on supporting inbound exchange students in the country.

Projects

AI for Handwritten Digit Recognition
